

Volatility Strategies Portfolio

Volatility Seasonality

- Bespoke systematic long gamma / long vega exposure
- Exploits persistent short term volatility anomaly across BTC and ETH
- Clear first principles and empirical explanation for the strategy edge
- Robust effect across different windows over the specific time period
- Trades liquid options a few times a month for short holding periods only
- Instrument selection and a focused trading cadence keep transaction costs and turnover low
- Outperforms during times of extreme market stress like 10/10
- Fully automated execution across RFQ and orderbook
- Automated 24/7 greeks and drawdown limit monitoring tailored to any allocator risk preference
- Accommodates both conservative (max DD 5%, annual return target 10%–20%) and high risk tolerance (crypto native) allocators (max DD 20–30%, annual return target 50%+)

	32.21%			11.98%			2.41			-3.09%			
	Annualized return			Annualized volatility			Sharpe			Max DD

Asymmetric Convexity & Mean Reversion

- Core multi-leg long gamma / long vega exposure across 2–4+ week tenors
- Calendars are adjusted to ATM IV term structure
- Risk-reversal overlays partially realize profits, trim convexity and asymmetrically monetize mean-reversion
- Capped-cost, same-maturity hedges for selected short options
- Adds wing convexity within portfolio position limits
- Identifies most asymmetric opportunities for long volatility to deliver excess returns
- Outperforms during times of extreme market stress like 10/10
- Multi-asset strategy across crypto (BTC, ETH etc.), equities and commodity futures both via IBKR or RWA options in crypto
- 200–1,000 contract capacity at allocations of up to \$100 million in crypto, stablecoins or USD
- Automated and manual execution across RFQ and orderbook
- Automated 24/7 greeks and drawdown limit monitoring tailored to any allocator risk preference
- Accommodates both conservative (max DD 5%, annual return target 10%–20%) and high risk tolerance (crypto native) allocators (max DD 20–30%, annual return target 50%+)

	39.47%			21.32%			1.67			-5.48%			
	Annualized return			Annualized volatility			Sharpe			Max DD
